Justice, Resilience, and the Environment
SFS 3821

Syllabus

The School for Field Studies (SFS)
Center for Ecological Resilience Studies
Atenas, Costa Rica

This syllabus may develop or change over time based on local conditions, learning opportunities, and faculty expertise. Course content may vary from semester to semester.
Please note that this is a copy of a recent syllabus. A final syllabus will be provided to students on the first day of academic programming.

SFS programs are different from other travel or study abroad programs. Each iteration of a program is unique and often cannot be implemented exactly as planned for a variety of reasons. There are factors which, although monitored closely, are beyond our control. For example:

- Changes in access to or expiration or change in terms of permits to the highly regulated and sensitive environments in which we work;
- Changes in social/political conditions or tenuous weather situations/natural disasters may require changes to sites or plans, often with little notice;
- Some aspects of programs depend on the current faculty team as well as the goodwill and generosity of individuals, communities, and institutions which lend support.

Please be advised that these or other variables may require changes before or during the program. Part of the SFS experience is adapting to changing conditions and overcoming the obstacles that may present. In other words, the elephants are not always where we want them to be, so be flexible!
Course Overview

Justice, Resilience, and the Environment (JRE) explores the concepts of justice, conflict, and social change within the Costa Rican context. Costa Rica is renowned for its significant efforts in forest regeneration and biodiversity protection. Tourism campaigns to highlight the tropical wonders often obscure the struggle between human development goals and the rights of nature. We will examine the connection between postcolonial practices and current development strategies to better understand Costa Rica’s efforts to protect people’s rights while honoring the rights of nature.

This course assesses community attempts to resist existing structural and institutional arrangements and encourage social change to better meet human needs in balance with the environment. We will see how groups create accountability through grassroots knowledge and power in Costa Rica, locating theory in concrete examples. We will analyze key themes of resilience-building including indigenous land rights struggles, agroecological production, seed sovereignty, and agrotourism.

Working with community stakeholders, students will conduct first-hand analysis of social issues. They will develop skills essential to future advocacy, community organization and the insights necessary for social change. Projects will examine the significance of social research in struggles for social justice. Field experiences in this course include working with indigenous communities, regenerative farmers, and communities tackling waste management issues. Students will conduct quantitative and qualitative research to prepare written, oral, and visual presentations that reflect their understanding of justice and social change. This fieldwork will prepare students for a final directed research project on the intersection of social and environmental justice challenges.

Learning Objectives

The core skills students will learn in this course are critical thinking and analysis, field techniques, communication skills as well as collaboration and time management. The specific objectives of the course are as follows:

1. To examine stakeholders and events in the historical development of Costa Rica and how they impact present day development strategies and rights protection.
2. To become acquainted with concepts and methods of resilience that apply to issues regarding development, public policy making, environmental laws, and public attitudes regarding human interaction with and reliance on natural world.
3. Recognize and respect alternative ways of knowing and communicating, including indigenous practices, rural practices and artistic expressions.
4. To critically analyze the complexities in environmental issues, including the responsibility to future generations, the problem of moral standing of human and non-human species, sustainability regarding human development, global environmental challenges, and environmental justice.
5. To critically assess alternative approaches to responsibility to nature through an environmental justice framework. To differentiate diversity-building and destructive practices in agriculture including social and environmental effects.
6. To identify the socio-economic and environmental impacts of tourism at the individual and community level and use data to recommend effective means of facilitating regenerative tourism.
7. To compare the development and resilience practices in Costa Rica with the Panama situation on during the international field trip.
8. To formulate your own social and environmental justice ethic and to articulate and defend these ideas with clarity and consistency.

All trips, discussions, materials, movies, and readings are part of the course so please come prepared to enjoy and learn throughout the program! You will learn and develop experimental design, interviewing techniques, basic descriptive statistics, proposal writing and communication skills.

**Field Lab: Student Attitudes Towards Bats (20%)**

Human activities are a serious threat for bats. Understanding the motivations and social perception of humans towards bats can be a powerful tool to develop conservation plans for these mammals that consider human impacts. Indeed, these assessments of the perceptions are important to creating awareness programs that address potential negative social attitudes. Surveys will be conducted with Costa Rican and SFS students about their attitudes towards bat before and after courses and interactions. Students will then compare the data and reflect on the significance of conversation education and awareness raising in relation to wildlife protection. This information will inform the CERES’ ongoing community outreach and bat education project.

**Field Exercise: Seed Saving and Food Sovereignty (20%)**

Preservation of functioning ecosystems depends on the reorientation of food systems to ensure a resilient food chain from production to consumption. Current conventional food production systems based on mechanization and agrochemicals are neither environmentally nor socially sustainable. Costa Rica is experiencing challenges to maintain local food sovereignty. Over 90% of the seeds used in Costa Rica are not certified by any producer, such as large agroindustry corporations. Seeds are instead bought, sold, and traded by farmers, seed cooperatives and small-scale producers. However, legislation has been proposed to require registration and, in effect, the privatization of seeds. This proposed restriction in the trade or sale of unregistered seeds threatens farmers’ rights to save and trade their seeds. We will visit Finca Orgánica San Luis to better understand how they are preserving ecological and cultural diversity through seed saving. This farm has started a seed business that sells organic, open-pollinated seeds adapted to local climate issues. We will explore how farmers work to preserve access to local seeds that have evolved with the environment and people as an act of resistance against proposed legislation that would require registration and, in effect, the privatization of seeds in Costa Rica.

We will plant and monitor seeds at the Center greenhouse and collect data on best conditions for propagation, resource needs, and care to ensure we create diversity and produce healthy food on
campus. Pairs of students will connect concepts from the collective art piece Resiste Mesoamerica to the experiences and theory covered in the first section of JRE. This reflection will tie topics like environmental protection, collective action, economic solidarity and seed sovereignty with themes we cover at Finca San Luis, Enraizadas and Semillas Plantae.

Reading Reflection (10%)
You will select one assigned reading during the semester and write a one-page reflection. Reflections may include a summary of key points and should contain your own assessment, analysis and/or insights on relevant points. You should also connect these points to our class topic. You will be asked to briefly share your insights with the class on the day the reading is assigned.

Midterm Project: Community Gardens Assessment (25%)
We will work with an Atena food security organization to collect data about community members’ opinions and ideas to collectively create a prospering community garden. We will present our findings to community stakeholders.

Final Essay (15%)
The final essay offers students an opportunity to reflect on the reported benefits and actual community impacts of ecotourism following our extended field trip to Osa Peninsula. Students will write an essay addressing whether improving well-being for residents, supporting biodiversity conservation using concepts like regenerative tourism, localization and environmental justice. Students will work in groups to create tools that could be used to invite/require tourists to participate in positive social and environmental practices will in Osa, based on their observations on the field trip.

Participation (10%)
A student’s ability to synthesize and share ideas is critical to the individual and classroom learning process. Participation in class and a general high contribution to group learning are expected at SFS. One’s ability to be a strong member of a learning community will enhance the grade assigned at the end of the program. Evaluation will reflect your actual contribution to the analyses, not simply the amount of time you talk. Thus, making thoughtful contributions that build upon topics of discussion are an important element of participation.

**General Reminders**

**Honor Code/Plagiarism** – SFS places high expectations on their students and we hold students accountable for their behaviors. SFS students are held to the honor code below. SFS has a zero-tolerance policy towards student cheating, plagiarism, data falsification, and any other form of dishonest academic and/or research practice or behavior. Using the ideas or material of others without giving due credit is
cheating and will not be tolerated. Any SFS student found to have engaged in or facilitated academic and/or research dishonesty will receive no credit (0%) for that activity.

“SFS does not tolerate cheating or plagiarism in any form. While participating in an SFS program, students are expected to refrain from cheating, plagiarism and any other behavior which would result in a student receiving credit for work which they did not accomplish on their own. Students are expected to report any instance of cheating or plagiarism by others.”

**Class Courtesies**

- Arrive at class on time.
- Come to class ready to participate.
- Create space for all students to participate and respect all opinions.
- Do not use computers or other electronic devices for reasons other than note-taking. If internet access is too great of a temptation, do not bring devices and computers to class.
- If you cannot come to a class due to illness or other serious issues, inform the professor or HWM. Email or check with professor later to find out what you have missed.

**Deadlines** – Deadlines for assignments are established to promote equity among students, to allow faculty enough time to review and return comments and grades before other assignments are due, and to avoid clashes with other activities and courses. Therefore, deadlines are firm, and extensions will only be considered under extreme circumstances. When appropriate, the files should be placed in the assigned folder within the students drive on the server. Late assignments will incur a 10% penalty for each day that they are late. Papers submitted after 3 days of the dateline will not be accepted. Please plan to avoid such situations. Assignments will be handed back to students within one-week grading period.

**Readings** – Assigned readings will be provided in a packet before the course begins. It is important that you read all materials before class since the volume of the material in the class requires a brisk pace. You are expected to have read all the assigned articles. In some classes, students will be assigned to lead the group by highlighting important concepts and raising questions for the group to consider/discuss.

**Content Statement** – Every student comes to SFS with unique life experiences, which contribute to the way various information is processed. Some of the content in this course may be intellectually or emotionally challenging but has been intentionally selected to achieve certain learning goals and/or showcase the complexity of many modern issues. If you anticipate a challenge engaging with a certain topic or find that you are struggling with certain discussions, we encourage you to talk about it with faculty, friends, family, the HWM, or access available mental health resources.

**Participation** – Since we offer a program that is likely more intensive than you might be used to at your home institution, missing even one lecture can have a proportionally greater effect on your final grade simply because there is little room to make up for lost time. Participation in all components of the course is mandatory, it is important that you are prompt for all activities, bring the necessary equipment for field exercises and class activities, and simply get involved.
## Course Content

Type - **L**: Lecture, **D**: Discussion, **RP**: Role Play, **FL**: Field Lecture, **LAB**: Lab/Workshop
